

MIDTERM TEST

ENG 285 H1F

October 2025

PAGE 1 OF 8

Duration: 1 hour 50 minutes

Aids Allowed: One 8.5 x 11 sheet of paper

*Do **not** turn this page until you have received the signal to start.*

Write your name and student number below
(do this now), then read the instructions.

STUDENTS MUST HAND IN ALL TEST MATERIALS AT THE END

Given Name(s):

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Family Name(s):

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student Number (9 or 10 digits):

--	--	--	--	--	--	--	--	--	--

UTORid (e.g., pitfra12):

--	--	--	--	--	--	--	--

- As a student, you help create a fair and inclusive writing environment. If you possess an unauthorized aid during the test, you may be charged with an academic offence.
- Turn off and place all cell phones, smart watches, electronic devices, and unauthorized study materials in your bag under your desk. If it is left in your pocket, it may be an academic offence.
- When you are done your test, raise your hand for someone to come and collect your test.
- In the event of a fire alarm, do **not** check your cell phone when escorted outside.
- Please use a **dark** pen or pencil to ensure your answers are legible (even when scanned).
- Answer each question directly on the test paper, in the space provided, except where indicated.
- Clearly label the answers you write in the blue book.
- This test contains 6 questions on 8 pages, including a Reference Sheet on the last page, printed on both sides of the paper. *When you start, please make sure that your copy is complete.*

Q1	Q2	Q3	Q4	Q5	Q6	TOTAL
7	2	4	7	6	14	40

Good Luck!

Question 1. [7 MARKS]

Beside each code fragment in the table below, write what is printed when the code is executed. If the code would cause an error, simply write ERROR. If the code runs but does not print anything, write the word NOTHING.

Code	Output, ERROR, or NOTHING
<pre>s = "I like reading" print(s[0])</pre>	
<pre>s = "I like reading" print(s[2:4])</pre>	
<pre>s1 = "dog" s2 = "cat" print(s1 + s2)</pre>	
<pre>s1 = "dog" s2 = "cat" print(s1 == s2)</pre>	
<pre>s1 = "dog" s2 = "cat" print(s1 * s2)</pre>	
<pre>words = ["rat", "mouse", "vole", "newt"] n = len(words) print(n)</pre>	
<pre>words = [] s1 = "dog" s2 = "cat" words.append(s1) words.append(s2) print(words)</pre>	

Question 2. [2 MARKS]

Complete the conditional statements below by filling in the blank boxes with either a simple conditional expression or an appropriate string that describes the result of the condition. Do not modify or add to code outside of the boxes. Assume `n` has been given a positive or negative integer value.

```
if n > 10:
    if :
        print("n is greater than 70")
    elif :
        print("n is 70")
    else:
        print("n is between  inclusive")
else:
    print("n is )
```

Question 3. [4 MARKS]

The variable `highs` contains a list of temperatures for the week. Your task is to write a snippet of Python code that will print the number of temperatures in `highs` that are greater than 20.

Below is an example value for `highs`. If this value was used, your code should print 3. Your code should still work correctly if we change the value of `highs`.

```
highs = [17, 21, 19, 18, 22, 30, 18]
```
